

Health Effects of Ozone Pollution

Ozone in the air we breathe can harm our health, especially on hot sunny days when ozone can reach unhealthy levels. Even relatively low levels of ozone can cause health effects.

Ozone is a powerful oxidant that can irritate the airways.

For Healthcare Providers

Ozone and Your Patients' Health:
Training for Healthcare Providers
<<https://epa.gov/ozone-pollution-and-your-patients-health>>

Who is at risk?

People most at risk from breathing air containing ozone include people with asthma, children, older adults, and people who are active outdoors, especially outdoor workers. In addition, people with certain genetic characteristics, and people with reduced intake of certain nutrients, such as vitamins C and E, are at greater risk from ozone exposure.

Children are at greatest risk from exposure to ozone because their lungs are still developing and they are more likely to be active outdoors when ozone levels are high, which increases their exposure. Children are also more likely than adults to have asthma.

What health problems can ozone cause?

Depending on the level of exposure, ozone can:

- Cause coughing and sore or scratchy throat.
- Make it more difficult to breathe deeply and vigorously and cause pain when taking a deep breath.
- Inflammate and damage the airways.
- Make the lungs more susceptible to infection.
- Aggravate lung diseases such as asthma, emphysema, and chronic bronchitis.
- Increase the frequency of asthma attacks.

Some of these effects have been found even in healthy people, but effects can be more serious in people with lung diseases such as asthma. They may lead to increased school absences, medication use, visits to doctors and emergency rooms, and hospital admissions. Some studies in locations with elevated concentrations also report associations of ozone with deaths from respiratory causes.

Long-term exposure to ozone is linked to aggravation of asthma, and is likely to be one of many causes of asthma development.

Ozone can cause the muscles in the airways to constrict, trapping air in the alveoli. This leads to wheezing and shortness of breath.

How can I reduce these health risks?

The AirNow Web site

<https://www.airnow.gov/> provides daily air quality reports for many areas. These reports use the Air Quality Index (or AQI) to tell you how clean or polluted the air is.

EnviroFlash, a free service, can alert you via email when your local air quality is a concern.

Sign up at www.enviroflash.info 

<https://www.enviroflash.info/>.

With inflammation, the airway lining is damaged. It has been compared to the skin inflammation caused by sunburn.

Pamphlets and other resources:

- Printable pamphlets and booklets about ozone effects on air quality and health. <https://epa.gov/ground-level-ozone-pollution/pamphlets-about-ozone-effects-air-quality-and-health>
- EPA's Air Quality Guide for Ozone https://epa.gov/sites/production/files/2017-12/documents/air-quality-guide_ozone_2015.pdf provides detailed information about what the Air Quality Index means. Helps determine ways to protect your family's health when ozone levels reach the unhealthy range, and ways you can help reduce ozone air pollution.
- Ozone and Your Patients' Health: Training for Health Care Providers <https://epa.gov/ozone-pollution-and-your-patients-health> is designed for family practice doctors, pediatricians, nurse practitioners, asthma educators, and other medical professionals who counsel patients about asthma and respiratory symptoms.
- AirNow Health Providers Information <https://www.airnow.gov/air-quality-and-health/your-health/> provides information on how to help patients protect their health by reducing their exposure to air pollution.
- EPA's Asthma Web Site <https://epa.gov/asthma> provides information for EPA's Communities in Action Asthma Initiative that includes programs to address indoor and outdoor environments that cause, trigger or exacerbate asthma symptoms.
