United States Forest Service
Dixie National Forest
Brian Head Resort Expansion Project
Project Summary #292353

We are writing in support of the Brian Head Expansion Project and support Alternative 2.

We believe this alternative is preferred due to its community and economic impacts, increased recreational opportunities to enjoy the mountains, and to meet the growing needs of the Southern Utah.

The project will support local jobs and tourism both during and after construction. And many more people will be able to enjoy and experience the beautiful outdoors and the fresh air. The additional terrain and infrastructure improvements will greatly impact the overall experience.

The project will help in preventing forest fires with proactive forest management.

The project looks to be well developed and planned over many years with input from USFS and members of the community with various alternatives explored.

I have personally skied and spent time at Brian Head. It is a beautiful and unique place that can accommodate more people and create more memories while people explore the great outdoors with their friends and family. We need to encourage more people to go outside and get away from screens while enjoying this beautiful part of the world.

We highly encourage your team to support the project and alternative 2.

With Kind Regards,

Joe VanderKelen
