Objection To Record of Decision for ACP through G.W. and Monongahela NFS.

To: Deputy Chief Glen Casamassa. I Have Already commented:

* We have enough natural gas and oil for 30 years, stocked and more in pipelines everyday.

This dying industry cannot be allowed to destroy these last mountains and wildlife, old forests and pollute the water sources to the Potomac and the Bay. It cannot be allowed to create poisonous smog in the air.

I am objecting to your horrendous decision to cross the last old growth forest on the East Coast, with the highest number of endangered species, and pristine waters that can only be destroyed by a fracked gas pipeline that will constantly leak fracking poisons through the pipe, everyday, into the earth, the water, and create smog in the air.

The ACP has also, NOT put a pipeline through Karst based mountain areas, that moves across places named Sinking Springs, Hot Springs, Sulfur Springs, etc. All these mountains move.

There are earthquakes already, and fracking gas escaping the pipes encourage more quakes.

It is the Forest Service's job(s). If you won't defend the area you were hired to protect, in every way possible, your jobs should be forfeit. This is your mission, it is all our mission.

Do Not Allow the ACP through the mountains ANYWHERE.
