Comments: Attention : Plan Revision

Dear Ms Ruyle

In this year of 2010 we need to see a better plan for taking care of our beautiful and special Coronado Nat. Forest.

Increased population in the area means the plan needs to better protect the unique and rich biological diversity. There will be many more feet on the ground, more recreation pressure. That means there needs to be more Wilderness areas, more ground protected so the plants and animals will still be there in the future for our great grandchildren.

We need rules to protect the forest from ATV's in the Wild Backcountry before it starts to happen , and rules about the use of what I call the flying lawnmowers, or ultralights that were in my area before McAfee left.

Then there need to be strategies for what climate change will brings to the forest. We are seeing so many Emory Oak die.

There is a need to address the use of the mountains by the drug runners and other illegals. Our hiking groups run into their trash and carry it out. Their fires get out of hand, their feet pound the trails and it certainly ruins a hike to run into them. According to the Border Patrol "they own the mountain tops"

.
