RE: GMUG Planning Revision Team: More MUT's Needed

Dear Planning Revision Team:

I ride. Shrinking and concertation of MUT (Multi Use Trails) is not serving community and public interests. We need an objective overview of Forest Health. MUT do not negatively affect forest health. The Continental Divide trails need to be MUT's. This serves the communities local interests. Please keep this in mind during the Planning Process and the management area framework.

Thank You.

Any planning efforts must comply with the best available science on whatever the management issue is in the area. Any citizen science or unpublished research must be viewed very critically by land managers.

Please see attachment and consider it part of my public comments.

Thank You for your time and consideration.
