Title:
Comments: Public Comments concerning the High Knob View Enhancement Project in the Clinch Ranger District of the George Washington and Jefferson National Forest.

The creation of early successional habitat and the plan to maintain this area in early successional habitat will be a tremendous benefit to the wildlife species that need this important habitat for part of their life stage. This will be a great benefit to native pollinators and migratory butterflies. I fully support a group selection harvest in the effort to create pollinator habitat and early successional wildlife habitat. This project will be a tremendous benefit to the high knob management area and will enhance the visitor experience to the high knob lookout tower. This will create more wildlife viewing areas while helping native pollinators. This is an excellent project and I fully support it moving forward as planned. I hope it can happen in a very timely fashion.
