Comments: The water ways within the GMNF need to be protected from camping violations and construction of latrines and human waste on the banks and in the streams. The current regulation of 100 ft is not being enforced on Owens Creek. The FS should look at adopting a 200 ft rule as other areas in the NF have done. Please see the two attached photo. The latrine shown is actually under water in the spring when the stream flows over the banks. This is a public health hazard.
