Comments: There should be more primitive and non-motorized areas at the north end of the Uncompahgre Plateau off Divide Road (see square on attached map). Currently, it seems if there are two motorized routes the area in between is designated motorized. Why not cherry stem the motorized routes and put green in between? Both groups want quick access from town, both groups want loops. Packed dirt parking pads at Divide Road and other routes will allow hikers and mountain bikers and motorized who arrive in a pickup truck with their motorcycles or ATV in the bed of the truck to park safely even when summer heat and dryness has turned tall grass to firestarters. "Don't park on top of dried grass" works better if there are enough packed dirt parking areas. Engage the public more long-term through citizen science projects.
