Dear Chris French,

The Greater Sage-Grouse currently occupies only 56% of its historic range. The Forest Service manages approximately 8% of the remaining Greater Sage-Grouse habitat. Protection of the Greater Sage-Grouse will protect the other 350 species that live in the same habitat.

Implementation of the Greater Sage-Grouse Proposed Land Management Plan Amendments is the way to proceed.

I used to frequent the area, hiking in the Wind River Mountains, and for a short time setting out GPS stakes for [ldquo]Thumper Trucks[rdquo] in the Jonah Oil Field South of Pinedale, WY. Oil boom there now?

Thank you for the opportunity to comment.

Edward Thomas Lefferts
