Title:

Comments: Thin all diseased trees. Your agency's name is the forest service, without a healthy forest all other questions are moot. I thinned timber for Georgia-Pacific in 77-78, my last year of school. (BS Geology) Since then I have made a good living logging. In 1985 I started cutting timber up Hornet Draw (Libby crk) and cut young healthy trees while leaving big diseased old trees. see Hornet draw now. Over the years I have cut many private, tribal and government timber sales and sadly where I see no regrowth potential has been in the Methow forest. Only here do you hear the word holistic. If you need the names of other federal foresters who have done good jobs (ie healthy forests) I can provide or contract whole job to Sierra Pacific and save millions.
