Comments: public comment on the federal register

this agency plants trees to make money from killing them rather than ever let nature be nature. this agency is about human taking and absconding with money from killing. this agency lies to the us public. this agency misuses words all of the time. never truthful. i am against the logging plans. against the road building plans, against the burning up the forest plans, against the entire plan. they hire wordsmiths who fool the public and scam the us public. i consider this plan the work of the devil - there is nothing natural or preservative about this plan at all. the 328 million americans who own this land are being scammed by their govt as usual. you see that going on every single day. this comment is for the public record. please receipt. jean publicee jean publix1@gmail.com
