Title:

Comments: As a local person I am concerned about the bears being stressed, how a significant amount of more visitors will transform the glacier area and how it will impact the Juneau people, aesthetics of the area for all.

It is stated this project is needed in order to continue to provide sustainable recreation experiences etc[hellip]., future visitor demand, just like cruise ships there needs to be a limit, way more people is not sustainable, the enlarged parking lot would look like a Walmart store. With thousands of more visitors each year how is this protecting the natural environment and resources. Will the entry fees be more money for all, will the annual Senior Park pass be honored, it is not honored now when people buy a ticket on the tourist bus to the Glacier.

The Glacier Spur Road for 3 new Trailheads with kiosks would help people see more sights in the area, will this new road look like a highway!

Transportation of expanded parking, would look ugly and it is needed, will there be way more permits given for buses, taxis and other vehicles wanting to take tourists to the Glacier, would the vendors be paying a high fee to get those permits, there will probably be a limit on how much a tourist will pay to have the family go to the glacier area.

The Pavilion removal and a new Welcome Center Complex, all those items planned would be huge. I would like to know what trails would be getting extensions. How will these new areas be managed, kept up to date, repaired etc. The Visitor Ctr. Expansion, sounds good and with it being near the Pavilion improvement area this area is beyond imagination.

Steep Ck. And boardwalk, wow lots of things there. The weather to a certain point determines the amount of water in the creek, and do we know why there were lower counts of Salmon coming into the creek.

Fish Viewing area is always nice to view, in the future will there be enough fish coming in. Steep Ck. Would these areas be wheel chair accessible. Is the City planning to put a limit on visitors coming into Juneau in the future.

Lakeshore Trail and bridge over Mendenhall River, this would help spread out the people and that wide sidewalk that is planned is good.

Docks and support facilities, I am against boats getting people closer to the Glacier, there is no way gas motors should be used, it would ruin the lake, to move the amount of people in the future across the lake would take several boats and looking out at the lake with all these boats would look ugly. So much for aesthetes.

I think a building on the West side of the lake is being proposed, and connect to the West Glacier Trail, that area going out over the rocks etc. is not easy, lots of loose gravel, is this the area where more tourists get lost during their own trekking. This is not for the average person to get too.

I will look forward to hear when new information is given to the public. Sandy
