Comments: Well, I don't have to tell you that I don't think the horse community that use these trails are being represented accurately. This is known as a premier riding area! If your not in the horse world, you have no idea of how huge the horse community is, and how many people come here to camp and ride. I believe the forest should allow for increase miles of trails to allow for week long stays in the area. The first thing people ask about an area is How Many miles of trails are there! People come from all over the USA to ride here, and want to stay more than 3 or 4 days. They won't do that if there is not enough miles to ride. The majority of trail riders ride gaited horses, so it's nothing for them to ride 20 miles a day. That would also increase spending in the area. I think some of the restrictions should be lifted holding back Recreation and tourism. More trails and spurs to scenic areas. So many beautiful spots and nobody gets to see them! No reason that I can even imagine why spurs can't be used where you ride in, tie up on highlines, and walk into the scenic areas. I travel to many states, and ride in other National forests, and they all allow this. Create looping, also increases miles. Please consider working with us, and let us show you our ideas for more trails, and more recreations! Thank you!
