Comments: Midas Gold Idaho's Stibnite Gold Project presents Idaho, particularly rural Idaho, with a huge economic and environmental opportunity. I am writing to encourage you to permit the project as quickly as possible.

The site is rich in gold deposits but it also has antimony, which was recently deemed a critical by the federal government. Antimony is used as a fire retardant and metal strengthener. It is used in everything from batteries, textiles, cell phones, plastics and cable sheathing. Right now, the U.S. doesn't have a domestic antimony mine. The Stibnite Gold Project could provide one-quarter of the American demand for antimony in the country. This is so important with the current tenuous trade relations in our country.

Thank you for your time and consideration.
