Comments: I fully support e-bikes being allowed on natural surface trails in the National Forests. e-bikes allow those that have injuries, disabilities, or are older to access our beautiful public lands all the same. e-mountain bikes are NOT motorcycles and are all Class 1 (pedal assist only, up to 20mph) from the major manufacturers. This means you cannot roost and damage trails. These bikes have the exact same impact on trail condition and soil as their analog counterparts, due to the fact the only difference is around 16-20lbs. Many other land managers have allowed e-bikes on their trails with zero problems.
