Comments: This letter is to express my support of Midas Gold's Stibnite Project. Whilst I am an international investor (so I acknowledge the appropriate weighting of my views), a major reason I've chosen this project to back is that it will bring such a positive impact to the environment - the water quality for fish, wildlife and nearby residents.

My specific support goes to alternative 2 option as it includes a plan to neutralize the metals in the tailings, greatly improving ground and surface water conditions; I also feel that time is an important factor and other slower options would mean conditions will only deteriorate.

Choosing the correct alternative is a vital part of the permitting process and am pleased that everyone is getting a voice that is being considered. I hope the U.S. Forest Service will realize the benefits of this project by permitting the Stibnite Project using alternative 2.
