Comments: Comments: "Revised Draft Environmental Assessment (EA) for the Porcupine Vegetation and Road Management Project"

David Meyers,

I would like to go on record in support of option 3b, please make consideration to keep the required biomass removal to a minimum, leaving as much as possible subject to agreement which it appears 3b has done. Also pay close attention to the normal operating seasons and surface replacement costs, often times the best operating conditions are during the fall/winter period but surface replacement costs plus normal operating costs exceed the marginal (if any) value of biomass.

Thank you for the opportunity to comment.

Ryan Hadley
