Title:

Comments: The proposal of the mine has outlined many efforts to protect the ecosystem but there is a risk even in the technology of modern mines and even that small risk should be enough to protect the river that is the South Fork Salmon. The memories I have on the Salmon river are my most prized possession and I believe many can say the same. Beyond that there are much more than risks there are real consequences to the mine that will affect the river even if things go according to plan. It is for these reasons I believe there should not be a mine.
