Building or expanding only one range per District will lead to severe overuse, congestion and overcrowding. These conditions will inevitably lead to violations of every management trigger described in the proposed action and ultimately a failure of the intentions of the IMTS. I have personally witnessed the outcome of too many people trying to utilize a limited resource and the destruction that occurs when that resource is stretched beyond the intended capacity. One range per District is currently inadequate, and grossly underestimates future demand. Why not build all 7 proposed ranges?
