Title:

Comments: I hereby submit this information for the Administrative record

Forest Service has included in their plan the use of the pesticide PZP a so called contraceptive this is being push by various advocates across the country but first Forest Service must prove overpopulation which they have never done . Why is this being overlooked by everyone ?

Forest Service has never proven overpopulation of wild horses . And they have never done and Environmental Impact Study why ? Because it might prove that the horses are not the problem but the over grazing by cattle is causing irreputable damage .

Please refer to attached documents photo's included Salt River Wild Horse mare and Roosevelt National Forest Wild horses is not an option this is a cash cow for someone but not for the wild horses

An EIS needs to be done before moving ahead with any management plan , how can you justify removing horses when they are actually a small part of the multi use forest .
