Comments: Dear Mr. Schilke,

I believe the time may have passed for official comments on the Taos Ski Valley's proposed improvements and expansion, however I am hopeful you will take my concerns into consideration in some way. I have been a resident of Arroyo Seco since 1987. My family still lives and farms there. I am opposed to increased development at Taos Ski Valley for one simple reason - water. If Taos Ski Valley is able to demonstrate via a complete Environmental Impact Statement (EIS) that there would be no adverse impact to downstream water quality or flow of the Acequia Madre del Rio Lucero y Arroyo Seco then I would not be opposed. I ask you to please do all in your power to make sure monied interests hoping to increase development in Taos Ski Valley are made to comply with Federally mandated Environmental standards. An EIS must be completed before this proposal can be considered for approval. I've attached a record of historically decreasing stream flow. Our land cannot afford to lose any more water. If the region cannot sustain new development due to insufficient water, then there should be no new development. If it can sustain new development, let the EIS prove this.

Thank you for considering my concerns,

Sincerely,

Francine Lindberg
