Title:

Comments: Hello!

My name is Tristan Moorehead. I am an Arborist with Kentucky Utilities and also a wildlife biologist. When looking through this project proposal I am convinced I'm both its importance and significance. I believe even through some of my independent research that this area with the right habitat management could be an amazing and successful area for Ruffed Grouse.

I also have some independent project going on I'm the McCreary County area. I currently have a habitat reconstruction project going on within some of our utility right of ways. We are converting roughly 30 acres of suboptimal habitat into pollinator habitat. Creating an early successional habitat that is beneficial to Ruffed Grouse among many other species. With the partnership that I created with the Forest Service on Daniel Boone down there I think there are even future opportunities for lining up projects. I am extremely excited about the future for this area!
