Title:
Comments: Hello Mr. Rathbone,My name is Tyrel Hulet and my family owns the cabins located in the SW1/4 SW1/4 of Section 32,Township 48N, Range 84W that borders USFS lands to the south and west. We received the ScopingNotice for the Pole Creek Vegetation Management Project in the mail. Sending the notice gives ustime to review and prepare comment on project areas that are near us. It is greatly appreciated.Thank you!I assume that the PDF maps that are included with the Scoping Notice were created in CADD or GISsoftware. Could I request shapefile information for the following proposed features in Sections 5and 6 of Township 47N, Range 84W? I can also provide a marked up PDF with the areas in questionif wish.Proposed Regeneration HarvestProposed Partial Harvest/ThinningProposed WUI Fuel Reduction ThinningNew Closed (level 1) RoadsTemporary Logging RoadsI know this project is at scoping level, and the boundaries of the proposed areas are, most likely,going change over the development of the project. I would like to review the boundaries with a littlebit more precision than the USGS quad maps. There looks to be an extensive amount of workplanned for areas in very close proximity to our structures. I am very grateful that the USFS is takingthe initiative in reducing fuels in these WUI areas, but am also wondering about the changes in thecharacter of the forest in those areas. Would you also be able to provide me with more descriptionof what each of the proposed thinning/harvesting definitions mean? Specifically I[rsquo]m looking for apercentage range of how many trees will be removed with each remedy.Thank you very much for your time. Have a great weekend!Tyrel HuletCivil Engineer
