Title:

Comments: Please protect our national forests from logging, including Telephone Gap. The National Forest Service should not be bringing in huge equipment to tear down the public's forests, especially those with older trees. We need our agencies to defend our forests from excavation of wild needs so needed during this time of climate change, ecosystem loss, biodiversity loss, weather system disruption, etc. Wild forests have been around for millions of years and are the best managers of their own health and well being. Please do not sacrifice them to destructive practices.
