Comments: Attached are photos showing the Rio Grande and the Confluence where the Rio Hondo enters the Rio Grande.

This is an important area for locals and tourists.

We eat from the waters here.

We swim in the waters here.

We go to the Hotsprings and bathe in the waters here.

Our pets drink from these waters.

This is the water that goes into our eyes and ears and we blow of our lips.

This is where 1,000 of gallons of TSV flowage meet the Rio Grande and us.

If the sewage plant is out of compliance, than we are all at risk. If the membranes fail, or the UV doesn't kill microbes.. we are the ones who get sick. Whether the membranes screen for pharmaceuticals or not becomes important.

Is the outflow safe enough to put into my eyes? From John Dunn onward, we are all effected by TSV's choices.

I would ask an independent auditor to inspect TSV's plant on a regular basis. I would ask that any member of the public be able to request treatment plant records.

An EIS would be a way of assuring the public's safety.

Thank you.
