Title:

Comments: The planetary biosphere is in collapse, now.

American National Forest system was created to Preserve the Forests of America for Americans.

For our Fresh Drinkable Water & Breathable Air.

Critical Resources for our National Security.

This is not just about Environmentalists & Loggers any more.

This is about American National Security, Homeland Security.

All Logging of National Forests should be implemented immediately, now.

At very least the "mature and old-growth forests on Forest Service lands" should be Protected from Logging & Damage by other projects. To Preserve their Oldgrowth Mature Forest Characteristics.

Of the "is initial inventory framework resulted in the Forest Service identifying an estimated 24.7 million acres of old-growth and 68.1 million acres of mature forest representing just over 17 percent and 47 percent of the 144.3 million total forested acres of National Forest System lands, respectively."

There is No Excuse any more for this continued Logging of National Treasures which are Needed for Human Species survival in this age of mass extinctions.

You are the US Forest Service!

Act Like It!

Please.
