Title:

Comments: I am greatly concerned and opposed to logging/ harvesting I Hoosier National Forest. The area is vital as an IBA(Important Bird Area) as it host a number of globally migratory birds as it is located in the Mississippi Flywaywhich has been a path long before Indiana was a thought! There are other renewable materials and methods which can fill the need rather that destroying another precious habitat. Please save the forest. It is not a resource to be used but rather preserved for carbon sequestration, beauty and habitat.
