Comments: Hi Stephaie

Here are Brad and Tyler's comments re the Comanche National Grassland Potential Species of Conservation Concern - herpetofauna.

Please let us know if you have questions or would like to discuss.

Re the spreadsheet - the number of CNHP element occurrence records is just those within the official boundary of the Comanche. It does not include records on the patchwork of private lands within the larger grassland footprint. We could easily rerun the analysis with a different footprint if that would be helpful.

We are hoping you have the recent CNHP dataset as part of the USFS data exchange.

Thanks for the opportunity to comment!
