Comments: I vigorously oppose this proposed significant increase in logging and associated development, and I am appalled by this clearly biased NEPA analysis. The climate and extinction crises are already incredibly serious and rapidly increasing in intensity. Bold reforms to increase environmental protection are needed. For example, please review the attached IPCC report. The Forest Service should be following the best science and not capitulating to corrupt MAGA Republican political pressure. Please don't sacrifice the ecological health and biodiversity of these beautiful public lands. Thanks for your consideration.
