Comments: Please recommend the entire great burn as wilderness or forward option A to the DEIS. Please drop Option B. This area has unparalleled quiet recreation and wildlife habitat. There are at least 5 distinct mountain goat populations along the stateline trail. The great burn provides a critical wildlife linkage between other large protected ecosystems. Why sacrifice all of this? How will you manage/monitor use in the SMAs? The Idaho side of the Hoodoo/Heart SMA is a grassy meadow - the groves that snowmobilers want to highmark are on the Montanan side which is off limits. Please be consistent in your management with the cold and continue to recommend the great burn as nonmotorized, nonmechanized wilderness.
