Comments: Comments Regarding Grass Valley Fire Restoration Project

Beth Stewart,

Southern California Edison Company constructs, operates, and maintains electric utility, communication, and hydroelectric facilities, including access roads, within the San Bernardino National Forest. Additionally, we conduct vegetation management activities as a part of maintaining our facilities. Some of our vegetation management involves the removal of hazard trees that may adversely impact power lines.

SCE is interested in understanding if the Forest Service's proposal may impact, either in a positive or negative manner, our ability to operate and maintain our utility facilities. For example, vegetation management around power lines should be conducted using certain methods to ensure public and worker safety. Additionally, the potential exists for SCE to collaborate or coordinate with the Forest Service regarding our respective vegetation management activities.

Would you please send me more detailed information regarding the location of the vegetation management activities proposed pursuant to the Grass Valley Restoration Project?

Thank you.
