4e. Are there high quality water resources or important watershed features?

"This is an important watershed for the entire Estancia Basin. Left (illegible) the trees will canopy and according to our monitoring data the moisture gets hung up in the trees and evaporate back into the atmosphere. Also it has been proven that if we don't manage and treat the Forest God will. after the fire will alter the water will be contaminated for miles around. please take this out of consideration"
