Title:

Comments: Here follows the potential objection points only transcribed from handwritten submission.

These chemicals are dangerous and should be phased out completely.

Projects effectively limiting the development of old growth conditions.

Much of the Roberts Gap project area was classified as RARE II in previous USFS studies[hellip]intervention in this area is effectively a decision in principle to limit wilderness expansion[hellip]This area is much more valuable as wilderness than any economic benefit from logging.

Please find ways to restrict the logging and preserve this exceptional forest.
