Comments:

How can Me and My wife even thinks about mining the claims the we are about to file for if the forest service keeps blocking thing that we want to do . I thought they where there to manage the forest and no block miners from mining . We are going to file for two claims and want to know we will be able to work them. The 1872 Mining law was very clean on access, Occupation and Development, the forest service has done more to stifle mineral holders, miners. They treat use as Visitors and not like Stake Holders they denied access to Claims and existing road and Trails. They can through and ruined the road to the mines. The forest service must accommodate stake holders and prospectors miners to the extent of 1872 mining laws, not more regulations, or limits. No where in the mining law does it say we have to consistently ask for permission and enter in to a contract with the forest service in are course of normal prospecting assessing are claims . Something needs to Change.
