

Snowmobile parking lot improvements should be completed as required under the original EIS/development agreement. This work should be required as part of the Ice Creek proposal. Parking lot and access to the same should be maintained by the Ski Area.

The image is an aerial photograph of a wooded area with several annotations. A red shaded area in the upper-middle section is pointed to by a red arrow from the top-right text box. A yellow dashed line runs vertically through the center and horizontally across the top and bottom. A red dashed line runs diagonally from the bottom-left towards the center, with a red arrow pointing to it from the bottom-right text box. A red solid line runs diagonally from the bottom-left towards the center, labeled with the number '12', with a red arrow pointing to it from the bottom-left text box.

Existing snowmobile access and parking is too restrictive and should be mitigated.

Existing snowmobile truck/trailer parking
