

I am writing in support of the Stibnite Gold Project and the benefits it will bring to Idaho. This project has the potential to put hundreds of Idahoans to work, bring a \$1 billion investment into our state and restore an area of Idaho's backcountry desperately in need of repair. Today, fish cannot swim past the Yellow Pine pit and heavy metals are leaching into the ground and surface water. The Stibnite Gold Project can leave the conditions better than they are today.

Regulators named Perpetua Resources' improved plan as its preferred alternative because the company proved it could mine safely while minimizing its impacts to the environment and community. Perpetua Resources will be transporting hazardous materials to and from the site, which is why I am grateful the USFS recognizes Burntlog Road is a safer option because it minimizes river crosses and rarely parallels waterways. As long as there is activity at the site, there will always be the possibility a spill could occur. However, the SDEIS concluded the duration of any single incident involving hazardous materials would only last hours or days and would likely be readily cleaned up and contained without any release to the environment. The SDEIS shows me Perpetua really can leave the site better than they found it.

Perpetua Resources wants to help America secure a domestic supply of the critical mineral antimony and clean up a brownfield site. They've made great improvements to the project from the original documents they submitted – this shows the permitting process has done its job. It is time to permit the Stibnite Gold Project and continue to move this important project forward.
