

I have been closely following Perpetua Resources' plans for several years. The Stibnite Gold Project presents an opportunity to restore an abandoned mine site and provide our nation with the critical minerals we need. I am grateful for the opportunity to comment on their SDEIS.

Given the history of the region, I was a bit skeptical when I first heard about this project, but it is clear that Perpetua is going out of their way to put environmental safety and restoration front and center. That is why the USFS identified the company's 2021 Modified Mine Plan as its preferred alternative. The refined plan eliminates the need for long-term water treatment, incorporates measures to manage stream temperatures and reduces impacts associated with access and transportation on Johnson Creek. The fact that regulators named the company's plan as its preferred alternative gives me great confidence in the company's plan. Plus, regulators have concluded the Modified Mine Plan will let Perpetua mine while giving consideration to environmental, economic and technical factors.

I encourage the U.S. Forest Service to move the Stibnite Gold Project forward, especially now with the further improvements to water quality conditions on site. This is just one example of how the permitting process has worked to improve the plan.
