

I am proud to submit my comments in support of Perpetua Resources' Stibnite Gold Project. This project presents our state with an incredible opportunity to bring well-paying jobs to rural Idaho, boost our state's economy and provide our nation with the much-needed critical mineral antimony. Today, America relies on China and Russia to provide us with antimony. The Stibnite Gold Project could help us secure a domestic source of antimony.

Restoring the Stibnite Gold Project site will be an incredible investment. Work clearly needs to be done in the area but it should not be funded through taxpayer dollars. Fortunately, Perpetua Resources wants to make the investment. The company is proposing a mining project and full-scale restoration project. They have plans to reconnect fish with their natural spawning grounds. Perpetua will also improve water quality and temperature. After the comments from the DEIS were analyzed, the company recognized it could do more in those areas. They added wider and taller riparian vegetation plantings around stream channels, as well as including a widened and deepened portion of the East Fork of the South Fork Salmon River Channel in the Yellow Pine pit backfill. The company will also solve sedimentation issues by repairing Blowout Creek.

Let Idahoans see the benefits of the Stibnite Gold Project. The USFS has reviewing the project for the last six years. During this time, the company has reduced the project size by 13% in the SDEIS, decreased maximum water temperature to keep it at or below baseline conditions and eliminated the need for long-term water treatment. The review process is working and now we need regulators to advance the project as expeditiously as possible.
