RE: Forest Service, include more citizen-proposed recommended wildernesses and special management areas in the GMUG DEIS!

Dear Dear,

Thank you for the opportunity to comment on the draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

The Forest Service must take this opportunity to protect important wildlife, water, and wilderness resources for future generations to come. This foresight will benefit Colorado public lands and the communities that rely on them as climate change alters some of Colorado's most prized landscapes. Specifically, I would like to see the Forest Service target areas with outstanding wilderness-quality and unique values in the forest plan. Here are specific recommendations:

1) Additional Recommended Wilderness and Special Management Areas

The Forest Service should add the following recommended wildernesses and special management areas to its forest plan:

- Mendicant Ridge Recommended Wilderness (11,279 acres);
- Muddy Country Watershed and Wildlife Conservation Area (61,200 acres);
- Pilot Knob Backcountry Wildlife Conservation Area (24,100 acres);
- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

In addition to including the six proposed areas in the forest plan, the Forest Service also must analyze the beneficial impacts of protecting these areas. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement. As you are aware, the GMUG forest plan revision will have long-lasting environmental impacts and the impacts to these areas must be rigorously analyzed.

Sincerely

Sincerely,
Lynn Dimmick

RE: Forest Service, include more citizen-proposed recommended wildernesses and special management areas in the GMUG DEIS!

Dear Dear,

My name is Jill Dahlman. I am an American citizen, born and raised in the US, the child of a military commander (Go Navy!), and a voter. I am also a lover of the wilderness and believe that we should all be working together to preserve future wildlife habitats for future generations to enjoy. I thank you for the opportunity to comment on the draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

As I noted earlier, I believe that portions of the US are best left protected so that future generations may enjoy what I have had the privilege of enjoying. Therefore, I believe that the time is prime for taking this opportunity to protect important wildlife, water, and wilderness resources for future generations to come. This foresight will benefit Colorado public lands and the communities that rely on them as climate change alters some of Colorado's most prized landscapes.

I would like to see the Forest Service target areas with outstanding wilderness-quality and unique values in the forest plan. Here are specific recommendations:

1) Additional Recommended Wilderness and Special Management Areas

The Forest Service should add the following recommended wildernesses and special management areas to its forest plan:

- Mendicant Ridge Recommended Wilderness (11,279 acres);
- Muddy Country Watershed and Wildlife Conservation Area (61,200 acres);
- Pilot Knob Backcountry Wildlife Conservation Area (24,100 acres);
- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

In addition to including the six proposed areas in the forest plan, the Forest Service also must analyze the beneficial impacts of protecting these areas. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement. As you are aware, the GMUG forest plan revision will have long-lasting environmental impacts and the impacts to these areas must be rigorously analyzed.

Thank you for taking the time to read my suggestions. I do believe with forethought,

we can preserve this land and its resources for future generations.

Sincerely

Sincerely,
Jill Dahlman

- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

There are two kinds of westerners. Those who believe the West should be cherished and enjoyed for its unmatched beauty and those who wish to exploit it for money. Be on the side of the lovers and not the greedy.

In addition to including the six proposed areas in the forest plan, the Forest Service also must analyze the beneficial impacts of protecting these areas. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement. As you are aware, the GMUG forest plan revision will have long-lasting environmental impacts and the impacts to these areas must be rigorously analyzed.

Sincerely

Sincerely,

Fred Malo

RE: Forest Service, include more citizen-proposed recommended wildernesses and special management areas in the GMUG DEIS!

Dear Dear,

Thank you for the opportunity to comment on the draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

The Forest Service MUST take this opportunity to PROTECT IMPORTANT WILDLIFE, WATER, AND WILDERNESS RESOURCES for future generations to come. This foresight will benefit Colorado public lands and the communities that rely on them as climate change alters some of Colorado's most prized landscapes.

Specifically, I would like to see the Forest Service target areas with outstanding wilderness-quality and unique values in the forest plan.

Here are specific recommendations:

1) Additional Recommended Wilderness and Special Management Areas

The Forest Service should add the following recommended wildernesses and special management areas to its forest plan:

- Mendicant Ridge Recommended Wilderness (11,279 acres);
- Muddy Country Watershed and Wildlife Conservation Area (61,200 acres);
- Pilot Knob Backcountry Wildlife Conservation Area (24,100 acres);
- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

In addition to including the six proposed areas in the forest plan, the Forest Service also must ANALYZE THE BENEFICIAL IMPACTS OF PROTECTING THESE AREAS. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement.

As you are aware, the GMUG forest plan revision will have long-lasting environmental impacts and the impacts to these areas must be rigorously analyzed.

PLEASE.

Sincerely,

Adele Riffe

Thank you for the opportunity to comment on the draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

The Forest Service must take this opportunity to protect important wildlife, water, and wilderness resources for future generations to come. This foresight will benefit Colorado public lands and the communities that rely on them as climate change alters some of Colorado's most prized landscapes. Specifically, I would like to see the Forest Service target areas with outstanding wilderness-quality and unique values in the forest plan. Here are specific recommendations:

1) Additional Recommended Wilderness and Special Management Areas

The Forest Service should add the following recommended wildernesses and special management areas to its forest plan:

- Mendicant Ridge Recommended Wilderness (11,279 acres);
- Muddy Country Watershed and Wildlife Conservation Area (61,200 acres);
- Pilot Knob Backcountry Wildlife Conservation Area (24,100 acres);
- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

In addition to including the six proposed areas in the forest plan, the Forest Service also must analyze the beneficial impacts of protecting these areas. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement. As you are aware, the GMUG forest plan revision will have long-lasting environmental impacts and the impacts to these areas must be rigorously analyzed.

Sincerely

Sincerely,
Cathryn Classen

RE: Forest Service, include more citizen-proposed recommended wildernesses and special management areas in the GMUG DEIS!

Dear Dear,

Thank you for the opportunity to comment on the draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

First and foremost, in the drafting of your plan, please preserve and promote new multi use recreational trails, especially motorized trails and motorized single track. Of course the area needs to remain economically viable, but the plan should allow for continued recreational opportunities as well as responsible resource extraction

Yes, the environment needs to be preserved, but, the forest can provide both recreational opportunities as well as economic benefits to the community

Sincerely,
Brady Van Matre

RE: Forest Service, include more citizen-proposed recommended wildernesses and special management areas in the GMUG DEIS!

Dear Dear,

Thank you for the opportunity to comment on the draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

The Forest Service must take this opportunity to protect important wildlife, water, and wilderness resources for future generations to come. This foresight will benefit Colorado public lands and the communities that rely on them as climate change alters some of Colorado's most prized landscapes. Specifically, I would like to see the Forest Service target areas with outstanding wilderness-quality and unique values in the forest plan. Here are specific recommendations:

1) Additional Recommended Wilderness and Special Management Areas

The Forest Service should add the following recommended wildernesses and special management areas to its forest plan:

- Mendicant Ridge Recommended Wilderness (11,279 acres);
- Muddy Country Watershed and Wildlife Conservation Area (61,200 acres);
- Pilot Knob Backcountry Wildlife Conservation Area (24,100 acres);
- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

In addition to including the six proposed areas in the forest plan, the Forest Service also must analyze the beneficial impacts of protecting these areas. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement. As you are aware, the GMUG forest plan revision will have long-lasting environmental impacts and the impacts to these areas must be rigorously analyzed.

Sincerely

Sincerely,
Beth Cashdan

RE: Forest Service, include more citizen-proposed recommended wildernesses and special management areas in the GMUG DEIS!

Dear Dear,

Thank you for the opportunity to comment on the draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

I am writing as an American who strongly supports full protection for Wilderness Areas throughout our country. I very much urge the Forest Service to please include protection for more wildernesses & wildlife in the GMUG Forest Plan!

I strongly urge the Forest Service to please take this opportunity to protect important wildlife, water, and wilderness resources for future generations to come. I urge this action because this foresight will benefit Colorado public lands and the communities that rely on them as climate change alters some of Colorado's most prized landscapes. It is crucial for the Forest Service to mandate and target areas for protection that contain outstanding wilderness-quality and unique values in the forest plan. Here are specific recommendations:

1) Additional Recommended Wilderness and Special Management Areas

The Forest Service should add the following recommended wildernesses and special management areas to its forest plan:

- Mendicant Ridge Recommended Wilderness (11,279 acres);
- Muddy Country Watershed and Wildlife Conservation Area (61,200 acres);
- Pilot Knob Backcountry Wildlife Conservation Area (24,100 acres);
- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

In addition to including the six proposed areas in the forest plan, I strongly urge the Forest Service to please analyze the beneficial impacts of protecting these areas. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement.

At this time, I thank you for your consideration of my letter. I strongly urge full protection for the wilderness, water and wildlife in the Grand Mesa, Uncompahgre and Gunnison National Forests, because the GMUG forest plan revision will have long-lasting environmental impacts and the impacts to these areas must be

rigorously analyzed.

Sincerely,
Jean Marie Naples, MD-Ph.D.

RE: Forest Service, include more citizen-proposed recommended wildernesses and special management areas in the GMUG DEIS!

Dear Dear,

Thank you for the opportunity to comment on the draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

The Forest Service must take this opportunity to protect important wildlife, water, and wilderness resources for future generations to come. This foresight will benefit Colorado public lands and the communities that rely on them as climate change alters some of Colorado's most prized landscapes. Specifically, I would like to see the Forest Service target areas with outstanding wilderness-quality and unique values in the forest plan. Here are specific recommendations:

1) Additional Recommended Wilderness and Special Management Areas

The Forest Service should add the following recommended wildernesses and special management areas to its forest plan:

- Mendicant Ridge Recommended Wilderness (11,279 acres);
- Muddy Country Watershed and Wildlife Conservation Area (61,200 acres);
- Pilot Knob Backcountry Wildlife Conservation Area (24,100 acres);
- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

In addition to including the six proposed areas in the forest plan, the Forest Service also must analyze the beneficial impacts of protecting these areas. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement. As you are aware, the GMUG forest plan revision will have long-lasting environmental impacts and the impacts to these areas must be rigorously analyzed.

Sincerely

Sincerely,
Josh Kuhn

These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

In addition to including the six proposed areas in the forest plan, the Forest Service also must analyze the beneficial impacts of protecting these areas. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement. As you are aware, the GMUG forest plan revision will have long-lasting environmental impacts and the impacts to these areas must be rigorously analyzed.

RE: Forest Service, include more citizen-proposed recommended wildernesses and special management areas in the GMUG DEIS!

Dear Dear,

Thank you for the opportunity to comment on the draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

The Forest Service must take this opportunity to protect important wildlife, water, and wilderness resources for future generations to come. This foresight will benefit Colorado public lands and the communities that rely on them as climate change alters some of Colorado's most prized landscapes. Specifically, I would like to see the Forest Service target areas with outstanding wilderness-quality and unique values in the forest plan. Here are specific recommendations:

1) Additional Recommended Wilderness and Special Management Areas

The Forest Service should add the following recommended wildernesses and special management areas to its forest plan:

- Mendicant Ridge Recommended Wilderness (11,279 acres);
- Muddy Country Watershed and Wildlife Conservation Area (61,200 acres);
- Pilot Knob Backcountry Wildlife Conservation Area (24,100 acres);
- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

In addition to including the six proposed areas in the forest plan, the Forest Service also must analyze the beneficial impacts of protecting these areas. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement. As you are aware, the GMUG forest plan revision will have long-lasting environmental impacts and the impacts to these areas must be rigorously analyzed.

RE: Forest Service, include more citizen-proposed recommended wildernesses and special management areas in the GMUG DEIS!

Dear Dear,

Dear Forest Service Planners,

I appreciate the opportunity to submit comments on the Draft Plan of the Grand Mesa, Uncompahgre, and Gunnison National Forests Plan Revision. These forests mean so much to my family, for my business, and the future of our community.

I have lived in Paonia since 2000, and I frequent our surrounding forests for biking, skiing, and learning about wildlife. My ten-year-old daughter and I go skiing up Stephen's Gulch, hike Lamborn Mountain, visit the Beaver Reservoir, leaf-peep over Kebler Pass, and gather Christmas trees in the Grand Mesa National Forests. I sincerely want my experiences in these areas to continue and to be preserved for future generations.

I care deeply about protecting the wilderness that exists in our National Forest lands and feel strongly that these resources can be lost very quickly if proper management doesn't exist. I emphatically support the recommended Wilderness designations included in Alternative D, as well as support the inclusion of all recommended Wilderness areas presented in the Community Conservation Proposal and Gunnison Public Lands Initiative.

After working for five years for the North Fork River Improvement Association when it was the watershed group for our area, I've witnessed first-hand how important water is to the future of my community. I support the protection included in Riparian Management Zones, but ask that standards and guidelines be enhanced. I support the eligibility findings for all the stream segments included in the draft revised forest plan. Ruby Fork of Anthracite Creek and Deep Creek, and other stream segments were previously found eligible but have been left out of the revised draft forest plan. Please include all eligible segments.

Resources must be protected if we want these forests to sustain their wildlife characteristics when my daughter is my age. I strongly support the Wildlife Management Area concept presented in the draft plan, and ask that those be retained and strengthened. Additional plan components for this designation are needed to ensure retention of security habitat for big game. Please implement a standard that requires leaving habitat blocks at least 500 acres in size with no roads or other human intrusions in big game habitat in all areas assigned to this management area. This will further bolster protections for wildlife species.

Your work on updating the forest plan for the Grand Mesa, Uncompahgre, and Gunnison National Forest is incredibly important, as it is the first opportunity for us all to update the current plan from 1983. THANK YOU for your efforts, and please prioritize the protection of wilderness, wildlife, and water resources in this new revision.

Sincerely,
Teresa Shishim

RE: Forest Service, include more citizen-proposed recommended wildernesses and special management areas in the GMUG DEIS!

Dear Dear,

Thank you for the opportunity to comment on the draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

The Forest Service must take this opportunity to protect important wildlife, water, and wilderness resources for future generations to come. This foresight will benefit Colorado public lands and the communities that rely on them as climate change alters some of Colorado's most prized landscapes. Specifically, I would like to see the Forest Service target areas with outstanding wilderness-quality and unique values in the forest plan. Here are specific recommendations:

1) Additional Recommended Wilderness and Special Management Areas

The Forest Service should add the following recommended wildernesses and special management areas to its forest plan:

- . Chalk Mountain Recommended Wilderness;
- Mendicant Ridge Recommended Wilderness (11,279 acres);
- Muddy Country Watershed and Wildlife Conservation Area (61,200 acres);
- Pilot Knob Backcountry Wildlife Conservation Area (24,100 acres);
- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

.
These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

In addition to including the six proposed areas in the forest plan, the Forest Service also must analyze the beneficial impacts of protecting these areas. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement. As you are aware, the GMUG forest plan revision will have long-lasting environmental impacts and the impacts to these areas must be rigorously analyzed.

RE: Forest Service, include more citizen-proposed recommended wildernesses and special management areas in the GMUG DEIS!

Dear Dear,

Thank you for the opportunity to comment on the draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

The Forest Service must take this opportunity to protect important wildlife, water, and wilderness resources for future generations to come. This foresight will benefit Colorado public lands and the communities that rely on them as climate change alters some of Colorado's most prized landscapes. Specifically, I would like to see the Forest Service target areas with outstanding wilderness-quality and unique values in the forest plan. Here are specific recommendations:

1) Additional Recommended Wilderness and Special Management Areas

The Forest Service should add the following recommended wildernesses and special management areas to its forest plan:

- Mendicant Ridge Recommended Wilderness (11,279 acres);
- Muddy Country Watershed and Wildlife Conservation Area (61,200 acres);
- Pilot Knob Backcountry Wildlife Conservation Area (24,100 acres);
- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

In addition to including the six proposed areas in the forest plan, the Forest Service also must analyze the beneficial impacts of protecting these areas. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement. As you are aware, the GMUG forest plan revision will have long-lasting environmental impacts and the impacts to these areas must be rigorously analyzed.

Sincerely

Sincerely,
Shirley Powers

RE: Forest Service, include more citizen-proposed recommended wildernesses and special management areas in the GMUG DEIS!

Dear Dear,

Hello Forest Service!

As a 6 multi-generational Coloradoan in his mid-30's I have quickly seen this state change its landscape from wild to contained areas. Please use this opportunity to set aside appropriate areas for wilderness designations and multi-recreational use. Oil and gas leases should be set aside when possible as they benefit a limited number of individuals.

Thank you for the opportunity to comment on the draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

Here are specific recommendations:

1) Additional Recommended Wilderness and Special Management Areas

The Forest Service should add the following recommended wildernesses and special management areas to its forest plan:

- Mendicant Ridge Recommended Wilderness (11,279 acres);
- Muddy Country Watershed and Wildlife Conservation Area (61,200 acres);
- Pilot Knob Backcountry Wildlife Conservation Area (24,100 acres);
- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

RE: Forest Service, include more citizen-proposed recommended wildernesses and special management areas in the GMUG DEIS!

Dear Dear,

Thank you for the opportunity to comment on the draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

I am writing as an American who strongly supports full protection for the Wilderness Areas in Colorado. I completely urge the Forest Service to please use this opportunity to protect important endangered wildlife, water, and wilderness resources for future generations to come. I support this action because this foresight will benefit Colorado public lands and the communities that rely on them as the climate change disaster crisis alters some of Colorado's most prized landscapes. Specifically, I urge the Forest Service to please target areas with outstanding wilderness-quality and unique values in the forest plan.

My specific recommendations include:

1) Additional Recommended Wilderness and Special Management Areas

The Forest Service should add the following recommended wildernesses and special management areas to its forest plan:

- Mendicant Ridge Recommended Wilderness (11,279 acres);
- Muddy Country Watershed and Wildlife Conservation Area (61,200 acres);
- Pilot Knob Backcountry Wildlife Conservation Area (24,100 acres);
- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

I support these actions because these areas include the presence of high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

In addition to including the six proposed areas in the forest plan, I urge the Forest Service to please fully analyze the beneficial impacts of protecting these areas. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement.

At this time, I thank you for your consideration of my letter and recommendations. As you are aware, the GMUG forest plan revision will have long-lasting environmental impacts and the impacts to these areas to ensure full protection for the Wilderness Areas in Colorado must be rigorously analyzed.

Sincerely,
Jean Marie Naples, MD-Ph. D.

- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

In addition to including the six proposed areas in the forest plan, the Forest Service also must analyze the beneficial impacts of protecting these areas. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement. As you are aware, the GMUG forest plan revision will have long-lasting environmental impacts and the impacts to these areas must be rigorously analyzed.

Sincerely

Sincerely,

RE: Forest Service, include more citizen-proposed recommended wildernesses and special management areas in the GMUG DEIS!

Dear Dear,

Thank you for the opportunity to comment on the draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

The Forest Service must take this opportunity to protect important wildlife, water, and wilderness resources for future generations to come. This foresight will benefit Colorado public lands and the communities that rely on them as climate change alters some of Colorado's most prized landscapes. Specifically, I would like to see the Forest Service target areas with outstanding wilderness-quality and unique values in the forest plan. Here are specific recommendations:

1) Additional Recommended Wilderness and Special Management Areas

The Forest Service should add the following recommended wildernesses and special management areas to its forest plan:

- Mendicant Ridge Recommended Wilderness (11,279 acres);
- Muddy Country Watershed and Wildlife Conservation Area (61,200 acres);
- Pilot Knob Backcountry Wildlife Conservation Area (24,100 acres);
- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

In addition to including the six proposed areas in the forest plan, the Forest Service also must analyze the beneficial impacts of protecting these areas. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement. As you are aware, the GMUG forest plan revision will have long-lasting environmental impacts and the impacts to these areas must be rigorously analyzed.

RE: Forest Service, include more citizen-proposed recommended wildernesses and special management areas in the GMUG DEIS!

Dear Dear,

Dear Mr. Stewart,

I am a retired biologist from EPA Region 8 . Having reviewed EISs for most of my career, I am very concerned about this draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

The GMUG must take this opportunity to move from their historical "industrial uses" of the national forests to a more preservation minded stewardship of the public's nation forest, to protect important wildlife, water, and wilderness resources for our future generations to come.

This shift in GMUG historical practices will benefit Colorado public lands and the communities that rely on them as climate change alters some of Colorado's most prized landscapes. Specifically, I would like to see the Forest Service target areas with outstanding wilderness-quality and unique values in the forest plan. Here are specific recommendations:

1) Additional Recommended Wilderness and Special Management Areas

The Forest Service should add the following recommended wildernesses and special management areas to its forest plan:

- Mendicant Ridge Recommended Wilderness (11,279 acres);
- Muddy Country Watershed and Wildlife Conservation Area (61,200 acres);
- Pilot Knob Backcountry Wildlife Conservation Area (24,100 acres);
- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

In addition to including the six proposed areas in the forest plan, the Forest Service also must analyze the beneficial impacts of protecting these areas. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement. Dear Dear,

Thank you for the opportunity to comment on the draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

The Forest Service must take this opportunity to protect important wildlife, water, and wilderness resources for future generations to come. This foresight will benefit Colorado public lands and the communities that rely on them as climate change alters some of Colorado's most prized landscapes. Specifically, I would like to see the Forest Service target areas with outstanding wilderness-quality and unique values in the forest plan. Here are specific recommendations:

1) Additional Recommended Wilderness and Special Management Areas

The Forest Service should add the following recommended wildernesses and special management areas to its forest plan:

- Mendicant Ridge Recommended Wilderness (11,279 acres);
- Muddy Country Watershed and Wildlife Conservation Area (61,200 acres);
- Pilot Knob Backcountry Wildlife Conservation Area (24,100 acres);
- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

In addition to including the six proposed areas in the forest plan, the Forest Service also must analyze the beneficial impacts of protecting these areas. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement. As you are aware, the GMUG forest plan revision will have long-lasting environmental impacts and the impacts to these areas must be rigorously analyzed.

Sincerely

Sincerely,
Kay Hannah

RE: Forest Service, include more citizen-proposed recommended wildernesses and special management areas in the GMUG DEIS!

Dear Dear,

Dear Chad Stewart,

I am sending the message to add my voice to the many others advocating for the protection of the GMUG National Forests. I regret that the Forest Service ignored the recommendations of groups advocating for forest protection, like the Wilderness Workshop, previously and I sincerely hope that now the Forest Service will indeed listen to public voices and not simply those who wish to benefit off of PUBLIC lands.

Thank you for the opportunity to comment on the draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

The Forest Service must take this opportunity to protect important wildlife, water, and wilderness resources for future generations to come. These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

In addition to including the six proposed areas in the forest plan, the Forest Service also must analyze the beneficial impacts of protecting these areas. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement. As you are aware, the GMUG forest plan revision will have long-lasting environmental impacts and the impacts to these areas must be rigorously analyzed.

Sincerely

Sincerely,

RE: Forest Service, include more citizen-proposed recommended wildernesses and special management areas in the GMUG DEIS!

Dear Dear,

My personal message to you today is about my home in the GMUG. Those of us LIVING HERE are making every effort to preserve and protect our corner of The Planet by actively moving away from the burning of fossil fuels and investing in renewable energy. This appears to be in stark contrast to the issuing of well permits to extraction companies from Texas and Canada interested in the profits available under our ground. They simply don't give a hoot about the constant truck traffic and environmental threats they pose to the gorgeous Muddy Creek Valley. The photo that accompanies this note shows a part Hubbard Creek and Condemnit Park, one of our family's favorite places to hike. The very reason it is called Condemnit is the result of rabid extraction that has taken place in our valley for decades. Please help us stop the exploitation of this beautiful country by including it in the areas protected by the proposed GMUG special management zones. Check out the areas that have already been exploited in The Muddy Creek Valley and you'll agree that the nature here is worth preserving. The future is renewable resources like the solar array we installed at cost to our home not the continued extraction of outmoded fuel sources.

Thank you!

And thank you for the opportunity to comment on the draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

Sincerely, Thomas Gordon

Sincerely,
Thomas Gordon

RE: Forest Service, include more citizen-proposed recommended wildernesses and special management areas in the GMUG DEIS!

Dear Dear,

Thank you for the opportunity to comment on the draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

The Forest Service must take this opportunity to protect important wildlife, water, and wilderness resources for future generations to come. This foresight will benefit Colorado public lands and the communities that rely on them as climate change alters some of Colorado's most prized landscapes. Specifically, I would like to see the Forest Service target areas with outstanding wilderness-quality and unique values in the forest plan. Here are specific recommendations:

1) Additional Recommended Wilderness and Special Management Areas

The Forest Service should add the following recommended wildernesses and special management areas to its forest plan:

- Mendicant Ridge Recommended Wilderness (11,279 acres);
- Muddy Country Watershed and Wildlife Conservation Area (61,200 acres);
- Pilot Knob Backcountry Wildlife Conservation Area (24,100 acres);
- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

In addition to including the six proposed areas in the forest plan, the Forest Service also must analyze the beneficial impacts of protecting these areas. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement. As you are aware, the GMUG forest plan revision will have long-lasting environmental impacts and the impacts to these areas must be rigorously analyzed.

RE: Forest Service, include more citizen-proposed recommended wildernesses and special management areas in the GMUG DEIS!

Dear Dear,

Mr. Stewart,

I am taking advantage of the opportunity to comment on the draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

The Forest Service has an opportunity to protect important wildlife, water, and wilderness resources for future generations to come. As a longstanding resident of this region and an avid hiker, hunter and fisherman, I urge the Forest Service to include as much proposed/recommended Wilderness as possible in the forest plan and the DEIS. Wilderness with a capital "W" is a critical management tool for the landscapes and waterways that ensures the health of the overall environment and the wildlife that relies on it. In turn, a healthy forest benefits communities that rely on the many benefits that drive their economies, whether in agriculture or recreation. As someone with friends in the mountain biking and snowmobiling communities, and as someone who occasionally partakes in those activities, I can say with experience that even the most avid bikers and snowmobilers will agree that Wilderness ensures the authentic backcountry experiences they often seek. It is a shared value when discussed in a way that describes the shared experiences in the backcountry. Finally, as climate change alters some of Colorado's most important natural resources, protecting areas with wilderness qualities is a way the Forest Service can "do its part" to participate in the solution.

Having communicated with the Wilderness Workshop and other organizations, I would like to add my name in support of the following recommendations to add the following wildernesses and special management areas to its forest plan:

- Mendicant Ridge Recommended Wilderness (11,279 acres);
- Muddy Country Watershed and Wildlife Conservation Area (61,200 acres);
- Pilot Knob Backcountry Wildlife Conservation Area (24,100 acres);
- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

This is not a lot of acreage, but these areas have high-value wildlife habitat and water resources. Please add them to the final revised forest plan. Additionally, I ask that the Forest Service include in the DEIS and ultimately the Forest Plan the direction necessary to analyze the benefits of protecting these areas for their outstanding wildlife, water, and wilderness qualities.

Sincerely,

Allyn Harvey

President, Wilderness Workshop Board of Directors

The Forest Service must take this opportunity to protect important wildlife, water, and wilderness resources for future generations to come. This foresight will benefit Colorado public lands and the communities that rely on them as climate change alters some of Colorado's most prized landscapes. Specifically, I would like to see the Forest Service target areas with outstanding wilderness-quality and unique values in the forest plan. Here are specific recommendations:

1) Additional Recommended Wilderness and Special Management Areas

The Forest Service should add the following recommended wildernesses and special management areas to its forest plan:

- Mendicant Ridge Recommended Wilderness (11,279 acres);
- Muddy Country Watershed and Wildlife Conservation Area (61,200 acres);
- Pilot Knob Backcountry Wildlife Conservation Area (24,100 acres);
- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

In addition to including the six proposed areas in the forest plan, the Forest Service also must analyze the beneficial impacts of protecting these areas. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement. As you are aware, the GMUG forest plan revision will have long-lasting environmental impacts and the impacts to these areas must be rigorously analyzed.

Sincerely

Sincerely,

RE: Forest Service, include more citizen-proposed recommended wildernesses and special management areas in the GMUG DEIS!

Dear Dear,

Thank you for the opportunity to comment on the draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

I often ski and hike in the National Forest backcountry near my friends' cabin in the Raggeds Reserve, reached by road from the top of McClure Pass. One of our most cherished views in every season is to the south, past the back of Chair Mountain and down the Muddy Creek valley, with Mt. Lamborn in the distance. The upper Muddy Creek Valley and the mountainsides surrounding it show little sign of human alteration or development. This view should remain unchanged.

The signs of climate change are everywhere and they are unmistakable. Oil and gas development of any kind should not be easily permitted, as every gallon of crude and every cubic foot of gas withdrawn from the earth takes us closer to that tipping point where the climate won't return to anything like normal in our lifetimes. Leave it in the ground.

The Forest Service must take this opportunity to protect important wildlife, water, and wilderness resources for future generations to come. This foresight will benefit Colorado public lands and the communities that rely on them as climate change alters some of Colorado's most prized landscapes. Specifically, I would like to see the Forest Service target areas with outstanding wilderness-quality and unique values in the forest plan. Here are specific recommendations:

- Muddy Country Watershed and Wildlife Conservation Area (61,200 acres);
- Pilot Knob Backcountry Wildlife Conservation Area (24,100 acres);
- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

In addition to including the six proposed areas in the forest plan, the Forest Service also must analyze the beneficial impacts of protecting these areas. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement. As you are aware, the GMUG forest plan revision will have long-lasting environmental impacts and the impacts to these areas must be rigorously analyzed.

Sincerely

Sincerely,
James Campbell

RE: Forest Service, include more citizen-proposed recommended wildernesses and special management areas in the GMUG DEIS!

Dear Dear,

Thank you for the opportunity to comment on the draft environmental impact statement (DEIS) for the Grand Mesa, Uncompahgre, and Gunnison National Forest's (GMUG) forest plan revision.

The Forest Service must take this opportunity to protect important wildlife, water, and wilderness resources for future generations to come. This foresight will benefit Colorado public lands and the communities that rely on them as climate change alters some of Colorado's most prized landscapes. Specifically, I would like to see the Forest Service target areas with outstanding wilderness-quality and unique values in the forest plan. Here are specific recommendations:

1) Additional Recommended Wilderness and Special Management Areas

The Forest Service should add the following recommended wildernesses and special management areas to its forest plan:

- Mendicant Ridge Recommended Wilderness (11,279 acres);
- Muddy Country Watershed and Wildlife Conservation Area (61,200 acres);
- Pilot Knob Backcountry Wildlife Conservation Area (24,100 acres);
- Hubbard Park Recommended Wilderness (5,238 acres);
- Lamborn Special Interest Area (14,100 acres); and
- Coal Mountain Recommended Wilderness (15,200 acres).

These areas have high value wildlife habitat, water resources, and wilderness quality. Please add them to the final revised forest plan.

2) Analyze Beneficial Impacts to Wilderness Character, Wildlife Habitat, and Water Resources

In addition to including the six proposed areas in the forest plan, the Forest Service also must analyze the beneficial impacts of protecting these areas. This should include, but not be limited to, benefits to the outstanding wildlife, water, and wilderness resources in these areas that were ignored in the draft environmental impact statement. As you are aware, the GMUG forest plan revision will have long-lasting environmental impacts and the impacts to these areas must be rigorously analyzed.
