Comments: Continuing to have motorized access to public land should continue and possibly be expanded.

Not everyone has the physical ability to enjoy the great outdoors under there own power. Winter motorized activities should be expanded the most I beleive, since snow recreation has the least amount of impact on the lands. Summer time motorized lands are a great way to enjoy our public lands as well. How are we to enjoy these lands that are deemed "public" if access continues to be limited. These lands where made public so everyone has the chance to enjoy and use them responsibly. If more areas are closed the remaining areas will be impacted significantly more. So the more area open the less widespread impact there will be.
