Title:

Comments: Now that there are many around the world beginning to realize that earth is rapidly being destroyed by over industrialization, it would be wise to reverse many of our uses of land & waters. Perservation must be the moto in order that there will be some place for our childern to live.

The earth was not created for us to change every known natural factor such as clean water, fertile lands; healthy forest; natural habitat and clean air. Let us all try to step back and readjust our lenses so that we can understand what we are doing to our lands, country and the world.

Thank You
