I ask that the Forest Service unequivocally exclude snow machine use from the Wilderness Study Area. Your current interpretation that ANILCA 1110 (a) permits recreational snow machine use as a "traditional use" in the WSA needs to be changed. Recreational snow machine use in this area is clearly not traditional in any sense of the term, is inconsistent with Wilderness management, and must be prohibited in the entire 1.9 million acre area. Please note how illegal snowmachine use has irreparably damaged the muskeg meadows around the Whittier municipality, and just inside the Wilderness area there, to see just how destructive snowmachines can be on this fragile landscape.

In addition, I ask that the Forest Plan prohibit recreational use of drones on the entire Forest. These are growing in use, are dangerous to aircraft and ground travelers, are noisy, and disturb both wildlife and other user groups.

Thank you.
