Comments: Forest Supervisor and other Revision Plan decision makers,

Living so close to an intact wild forest ecosystem keeps my heart so content knowing it was saved from salvage clear-cut logging and after the Exxon oil spill national disaster the uplands were protected under the WSA as we know what ongoing damage the hydrocarbon pollution has done to the marine habitat.

Therefore I am writing to share my enthusiasm for all efforts to finally make the WSA a federally protected Wilderness instead of any rollbacks in management. In fact I would like there to also be at least 5 eligible rivers within the CNF to be managed as Wild Rivers. If our federal government can find 1.1 Trillion dollars a year dedicated to military funding they can allocate more money to managing this intact wild rivers for their pure water and fish habitat.

Furthermore please manage the Eastern Copper River Delta as ANILCA wilderness to allow for subsistence fishing.

Lastly there needs to be support from the USFS to protect all lands and waters from subsurface development such as mining and fracking to maintain the integrity of this amazing forest ecosystem for future generations.

Thank you!
