Title:

Comments: huge economic impact that farming has to our counties, and I don't think that the Colville plan, as proposed, will fit in with our voluntary stewardship process that our County Commissioners have taken on. This gives us an opportunity to maintain the viability of agriculture as an economic way of life, and so when we see grazing reduced within the Colville that has a direct economic impact on our farmers and ranchers. the decrease of forest harvest that has a really strong economic impact on our community, not just because our loggers aren't logging, but it has a direct impact on the school money that our schools get, and the fact that we aren't getting as much as we used to.
