Comments: The current proposed plan does not properly address the overgrown conditions in the CNF. Please develop another alternative that contains this focus to improve the health of the forests on the CNF, reduce exposure to catastrophic fire and to provide raw materials to area sawmills.

The CNF is fortunate to have sawmill infrastructure that provides a market for materials coming from the forest. It would be irresponsible to not increase treatments on the Forest given current overstocked and overgrown conditions.

As a land manager of industrial timberlands within the CNF, more needs to be done on NFS lands to treat stands in proximity to private lands to prevent loss from adjacent fire starting on NFS lands. It is irresponsible to ignore this threat. Thank you
