Comments: Reading room glitch

The Comment reading room loads with comments up to sometime earlier today however there is no way to read any comments. Yesterday I was able to click =directly on the commenters name & it would open up. Today the little wheel just spins & spins & nothing occurs unless or until a blank page loads...this is unacceptable! The public needs to be able to read those comments! We are heading into a 3 day weekend wherein many will want to peruse the comments in order to help advise their own. Can't this be fixed?

Please advise.

Thank you so much

Melissa Rose
