Comments: I would ask that the Forest Service take into consideration the fact that there are residents who live close by the proposed drill sites. These residents have had to endure 24/7 drilling by multiple drill rigs on the proponents private land. Now the proponent plans this new drilling on the public land.

The Forest service needs to analyze the cumulative effects of this constant drilling on the health and well being of the local residents. I would ask the Forest service personnel who would review this proposal, How would it effect them to have to listen to this noise on such a continuous basis.

I would ask if the Forest Service approves this project that they limit the drilling to 9am to 5pm with weekends free of drilling. The proponent has the ability to be completely disrespectful to the local residents but this is public land and the Forest Service should mandate the restricted hours in their final decision.
