Comments: Ten Cent Community Wildfire Protection Project

I talked with someone today about the Wildfire Protection Project. My cabin is near the 136 and 138 fire thinning operations. I support this thinning as that area does have a higher than normal growth that would be fire hazard. My cabin is located on Porterville Lane outside of Granite, Oregon.

Overall, I don't support turning all of our forest into older growth forest and believe that an actively managed forest with commercial harvests of tree is in the best interest of all people and animals. This provides the variety of environments to support a diverse plant and animal base. Overall, I support this project, but believe additional commercial logging should happen on the Forest Service land in this area to reduce fire hazard, decrease bug kill, and support a better diversification of plant and animal life.

Thanks
