Comments: The Wrangell Timber Sale

To Whom This May Concern,

The Tongass offers the country's largest remaining swath of ancient forest, as well as an estimated one third of the world's remaining temperate rainforest. It is far past time for an end to old-growth logging and destruction of habitat essential for endemic species found only in this biologically rich region. I support Alternative 1, the "no-action" alternative because in this alternative, none of the proposed logging activities would occur.

Thankyou for your time and consideration of this extremely important matter,

E.A.Allen
