Comments: After reading information from information provided by Midas Gold Idaho, Inc. I was impressed with what they indicate they will do to restore and protect the site. I have been impressed with sites that follow Canada's MAC and the TSM mining guidelines. I have seen the restoration of the land by Canadian mining companies and was positively impressed. IF Midas Gold Inc. follows the MAC guidelines it will benefit the present Stibnite site. My concern is that once the mining area is closing, what legal and financial enforcement exists to make sure Midas Gold company will actually follow through with its published restoration guidelines.

Disrupting nature can have negative impact for generations as has happened at Stibnite. Will this company leave this very large area better than it is now?

The fact that I can neither support nor reject this project is a major change from my original and immediate rejection of this project. My concern is with the application and enforcement of the restore plan as provide by Midas Gold INC.
